

Overview

Advanced clinical information systems require a reliable, scalable, fast infrastructure. The infrastructure must always be available as patient care relies on continual availability of the clinical applications. Highly available systems don't happen by chance. Careful planning and ability to execute are essential components to building high availability systems. A typical MEDITECH infrastructure includes the following components.

- An array of servers
- Storage Area Network
- Operating System software
- Local Area Network
- Wide Area Network
- Remote Access Technologies
- Backup Software & Console, Tape Library
- Disaster Recovery plan and capability

Our Solution

We provide the following consulting or managed services specialized for your MEDITECH Infrastructure.

- Assessments:
 - Data Center*
 - Network*
 - Security*
 - Remote Access*
- Systems Administration
- Storage Analysis
- Disaster Recovery Planning and Testing
- Magic Operating System:
 - Administration and Best Practices*
 - Capacity Planning*
 - Performance Management*

Our Benefits

Our services deliver the following values:

- Reduction in infrastructure problems through the introduction of standards and proven MEDITECH Infrastructure configurations
- Improved systems/network availability
- Improved network speed resulting from optimized network design and elimination of network bottlenecks
- Better execution of projects through the elimination of technological incompatibilities and anticipation of what can go wrong which ultimately slows project progress and increases cost

The Davidson Partnership

Our ambition is the use of information technology to improve the quality and safety of care provided by our clients. We measure our success by our ability to achieve results for our clients. We believe better ways to use information technology should be shared in an effort to make the healthcare delivery system safer and more patient focused. We genuinely care about our clients and helping them acquire and implement available, reliable, secure, fast information systems. We believe it's all about the patient and what the technology can do to help health care professionals care for the patient.
